

Introduction to Health and safety

In this video you will get an overview of the Health and safety tools in FarmIQ.

FarmIQ helps you with your health and safety obligations and allows you to manage health and safety for yourself, your staff and visitors to your farm.

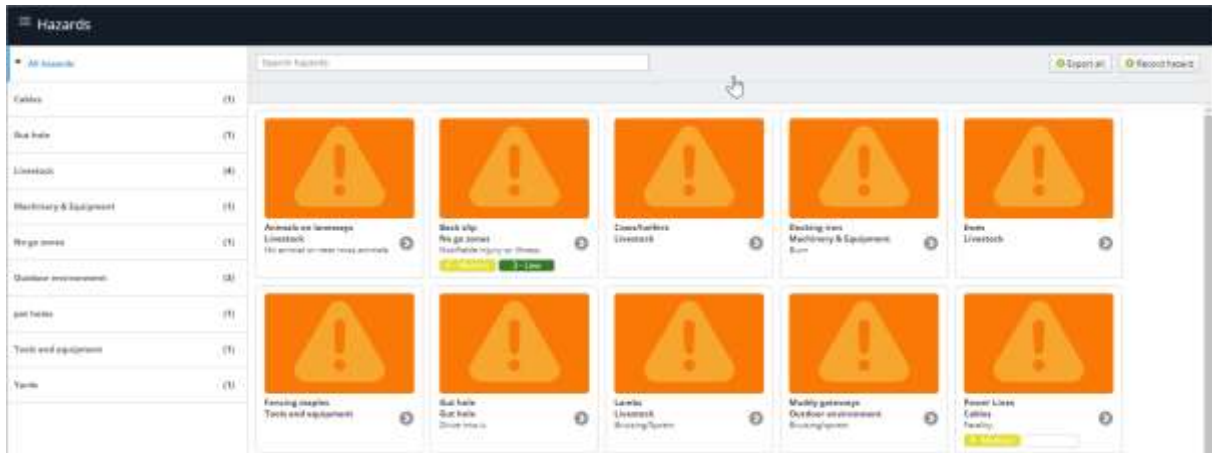

FarmIQ enables you to keep an active register of visitors and contractors on your farm.

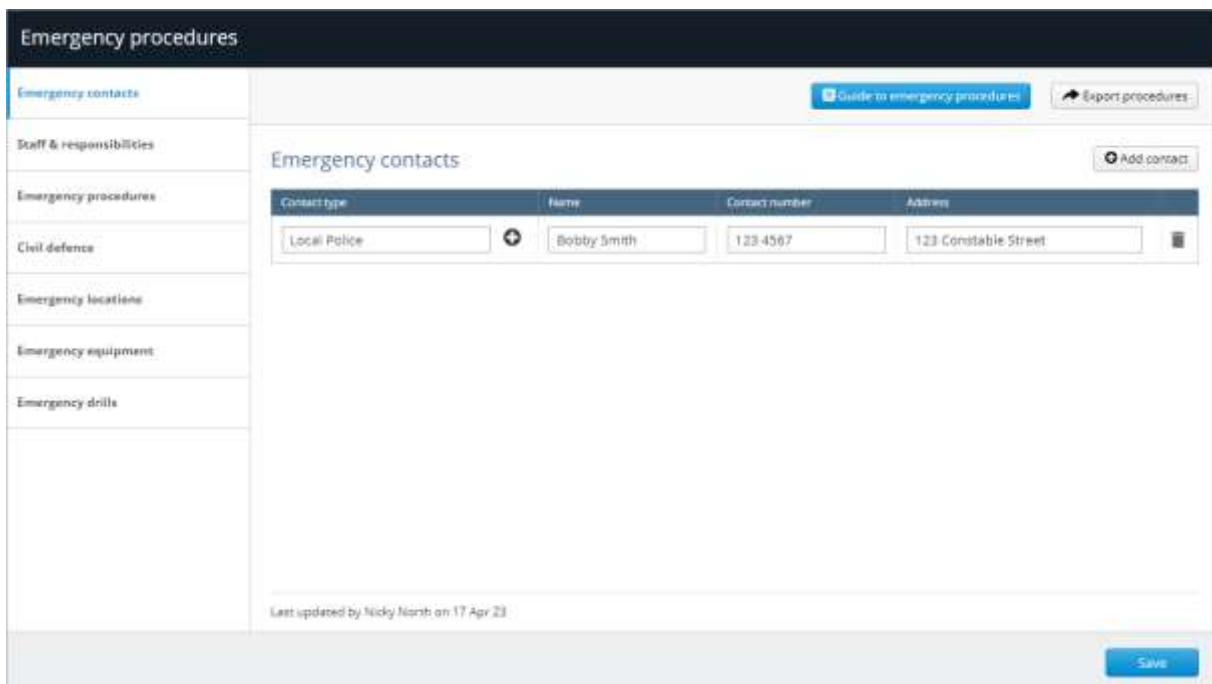

Contractor management helps you keep a record of the qualification checks of contractors that you use.

You can record all Incidents and safety interactions such as injuries or near misses, as well as safety conversations that you have with your team.

The Hazards and risks section lists all identified hazards on the farm, along with what actions can be taken to minimize or eliminate them.

All your information about your farm’s specific Emergency Procedures including meeting points, location of first aid equipment and staff qualifications can be recorded and found here.

You can record general staff meetings and their minutes.

Keeping all this information in FarmIQ makes it easy to find and keep up to date when policies and on-farm processes change.
